A Connected Aviation Future

Indonesia is committed to contribute more for international civil aviation to **promote a safe, inclusive, and sustainable global aviation system** through stronger cooperation and shared responsibility among ICAO Member States.

Indonesia by the numbers

17.000+
Island

As an archipelagic country, aviation is **the most critical transport mode in Indonesia**. Therefore, Indonesia maintains civil aviation safety and security at the highest achievable level.

270M+
Populations

Great potential in aviation demand driven by Indonesia geographical characteristics.

100M+
Passengers

Rank 16th globally in 2025. More than 60% of its traffic is domestic flights.

700K+
Domestic + International Flights

International flights **grow by 9% in 2025** compare to 2024.

200+
Airports

Extensive network supporting national and regional connectivity

300+
Routes

An extensive network of domestic and international routes linking major cities and remote regions

100+
State Recipient

As a donor country, Indonesia has continuously provided technical assistance and aviation training from 101 countries during year 2021 to 2025.

4th
Largest

Airports Council International (ACI) projects Indonesia will become the world's **fourth-largest aviation market by 2054.**

Indonesia's Contribution to International Civil Aviation

01 Active in ICAO Assemblies and technical bodies

02 Alignment with ICAO Standards and Recommended Practices

03 Support to GASP and GANP

04 State Representation Office in Montreal

INDONESIA'S COMMITMENT TO INTERNATIONAL CIVIL AVIATION

SAFETY & SECURITY

Indonesia places aviation safety and security as its foremost priority and is fully committed to the effective implementation of the standards and recommended practices of the International Civil Aviation Organization. In this regard, Indonesia achieved a notable milestone on aviation safety and security attaining a commendable level of performance.

Therefore, Indonesia continues working to ensure that the aviation safety and security as its priority goal. On this principle, Indonesia invites collaborative mechanisms aimed at strengthening oversight capabilities and promoting the effective implementation of ICAO SARPs among member states.

As a country consisting thousand of Islands, Indonesia is closely monitoring the development of seaplanes and amphibious aircraft as a mode of transportation connecting islands. By 2025, Indonesia had developed standard operating procedures for aircraft movements in waters that combined aviation and maritime SARPs to ensure safe flight operations and clarity regarding aircraft navigation coordination responsibilities while manoeuvring in waters. This can be adopted and shared to other countries.

Furthermore, Indonesia continues to modernize its regulatory framework, align national regulations with ICAO SARPs, and implement Corrective Action Plans arising from ICAO audit activities. In addition, Indonesia actively supports regional safety in the form of technical assistance and cooperation to enhance the safety and security oversight capability within the Asia-Pacific region.

Through these concrete measures, Indonesia reaffirms its commitment to contributing to a safe, effective, and resilient global aviation system.

SUSTAINABLE AVIATION

Indonesia reaffirms its support for ICAO's Long-Term Global Aspirational Goal (LTAG) of net-zero carbon emissions by 2050 including its supportive measures such as the development of Indonesia's State Action Plans (4th edition in December 2025) and CORSIA implementation in which Indonesia prepares for the offsetting phase. Indonesia acknowledges the importance of SAF production in carbon emission reduction, and underline the importance of feedstock neutrality and a technology-agnostic approach, to promote a fair and inclusive strategy to accelerate global SAF deployment.

Indonesia also recognizes the value of international cooperation and actively works with other States and global aviation organizations to strengthen its contributions to environmental initiatives. To support this commitment, Indonesia collaborates with various international aviation organizations to explore and develop opportunities for further cooperation. For the past decade , Indonesia also serves as a member of ICAO's Committee on Aviation Environmental Protection (CAEP) and contributes experts to its working groups: the Fuel Task Group, CORSIA, Noise Technical, Emissions, and Airports & Operations.

Moreover, in 2025, DGCA Indonesia established a dedicated Environmental Unit to accelerate the country's progress on SAF and the CORSIA scheme. This action reiterates Indonesia's focus in reducing aviation emissions and meeting international commitments. With a clear mandate and dedicated team, the Environmental Unit strengthens collaboration with industry, research institutions, and international partners.

Furthermore, Indonesia consistently contributes to ICAO's aviation environmental protection agenda through a collaborative, action-oriented approach. Through ICAO platforms such as buddy partnerships (ACT-CORSIA / ACT-SAF), Indonesia extends technical assistance across regional countries such as Southeast Asia, South Asia, and Pacific Small Island Developing States (PSIDS). This is a concrete manifestation of Indonesia's commitment in supporting ICAO's initiative of "No Country Is Left Behind" and a pledge of green aviation commitment.

CAPACITY DEVELOPMENT & GLOBAL AVIATION EMPOWERMENT

Recognizing that aviation safety, security, and environmental protection rely heavily on the availability of qualified and competent human resources, Indonesia places strong emphasis on capacity-building initiatives not only for its national aviation workforce but also in support of personnel from other ICAO Member States worldwide through the assignment of qualified Indonesian experts in Aviation Safety, Security and Environment.

Through the Indonesia–ICAO Developing Countries Training Programme (DCTP), initiated in 2021, Indonesia has significantly contributed to global capacity development. As a Platinum Member of the ICAO TRAINAIR PLUS Programme, Indonesia has established itself as a premier hub for aviation training in the Asia-Pacific region. These accomplishments have enabled Indonesia to play a meaningful role in advancing global capacity development, benefiting participants from 101 ICAO Member States from the period 2021-2025.

Moreover, Indonesia established cooperation with ICAO through the secondment program by assigning its personel to work at the ICAO offices in order to continuously support ICAO's work programmes.

These commitments affirm the quality of Indonesia's aviation human resources at the global level and promote its training centre as centres of excellence in global aviation training.

INCLUSIVITY AND EQUALITY IN AVIATION

Indonesia remains firmly committed to advancing gender equality within the civil aviation sector. Progress is evident across all professional levels, both within our regulatory authority and throughout the broader aviation industry. Today, women represent approximately 25% of civil aviation workforce.

In Indonesia, our commitment is marked by distinguished leadership history. DGCA Indonesia has been simultaneously led by two exceptional female leaders who served as director general. Their enduring contributions highlight the significant impact of women in shaping the aviation sector and exemplify leadership excellence at the highest levels.

At the technical level, it is noteworthy that currently the number of active licensed female personnel has reached a significant milestone of 2.500 aviation security personnel, 442 pilots and 634 air traffic controllers.

Indonesia commit and recognize that true progress lies in sustained effort and inclusive policy. and continue to champion a holistic and inclusive approach to ensure that no one is left behind in this vital sector.

INDONESIA AIMS TO DELIVER

Committed to provide **technical assistance** to neighboring states in the fields of aviation safety, security and enviromental protection

Extending **fellowship programmes** with a targeted, needs-based focus on Pacific Small Island Developing States and ICAO Developing States

Designate qualified staff to the ICAO Offices (Headquarter, Regional and Sub-Regional) through **secondment programme**

Committed to collaborate with ICAO Member States in the field of SAF production and CORSIA eligible emissions unit through **expert exchange**

Advocating concerns of developing and archipelagic states through **active participation** in the ICAO APAC region and headquarters in Montreal to further organization's goals and objectives particularly in the committees, commissions and working groups

Ensuring the **voice of Asia-Pacific** States are effectively addressed in order to enable a consistently high standard of civil aviation performance in the region

WHAT INDONESIA BRINGS

- Experience in complex airspace operations
- Regional leadership in Asia-Pacific
- Large-scale connectivity solutions
- Practical and solution-oriented approach

INDONESIA'S CANDIDATURE

The Government of the Republic of Indonesia has the honour to announce to the 43rd Session (Extraordinary) of the Assembly of the International Civil Aviation Organization (ICAO), its candidature for election as a Member of the Council of ICAO.

Indonesia respectfully requests the support of ICAO Member States at the elections to be held during the 43rd Session (Extraordinary) of the Assembly.

READY TO CONTRIBUTE. READY TO COLLABORATE. READY TO DELIVER.

Committed to Working Together for a Safe, Inclusive and Sustainable Aviation.
